

DIY

Environmentally friendly insecticide for Aloe White Scale (*Duplacionaspis exalbida*)

mix 250ml water and 1 tablespoon grated sunlight soap in a small pump spray bottle and shake until all soap is dissolved.

Spray directly onto the infested areas.

After 10 days, use a soft brush to remove the scale.

This will prevent any new population.

Repeat until the white scale is completely removed.

*This recipe will fill a small hand held pump spray.

*The soapy mixture will keep for multiple sprays.

*Only use spray on very sunny days, after the dew has evaporated.
